Polimorfisme

Pemrograman Berorientasi Objek muhamad.soleh@iti.ac.id

Polimorfisme

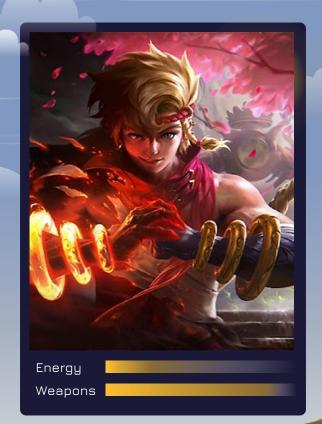

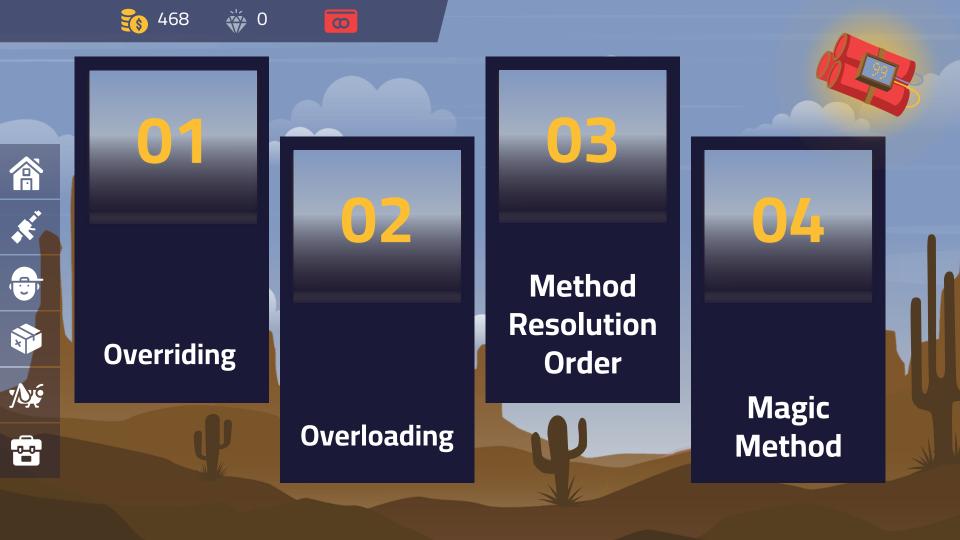

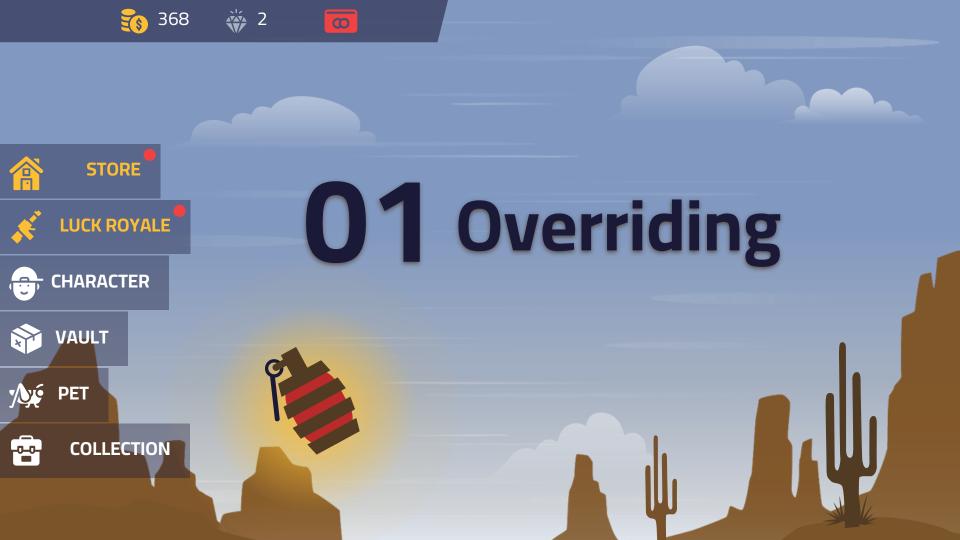

- Dari segi bahasa, *Polimorfisme* (bahasa inggris: *Polymorphism*) berasal dari dua kata bahasa Latin yakni *poly* dan *morph*.
- Poly berarti banyak, dan morph berarti bentuk. Polimorfisme berarti banyak bentuk.
- Sehingga dalam pemrograman berorientasi objek, polimorphisme merupakan kode program yang memiliki satu entitas tapi berbagai bentuk.

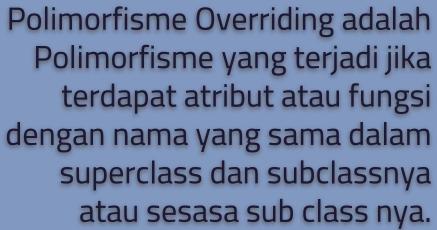

Polimorfisme Overriding

- Polimorfisme sangat erat kaitannya dengan konsep inheritance / pewarisan. Polimorfisme hanya akan terjadi jika dalam program terdapat konsep pewarisan.
- Polimorfisme terdiri dari 2 konsep, yaitu Overriding dan Overloading.
- Overriding biasa juga disebut sebagai True polmorfisme

02 Overloading

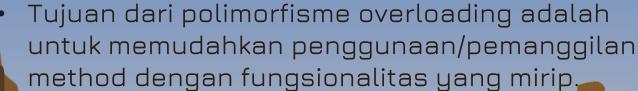

Overloading

 Polimorfisme Overloading terjadi ketika kita memiliki method dengan nama yang sama, namun jumlah **argumen** nya **berbeda** pada dua kelas class yang menerapkan konsep inheritance.

Magic Method

- Magic method adalah method yang diawali dan diakhiri dengan double underscore.
- Kita akan mempelajari magic method lainnya yang terdapat dalam Bahasa pemorgman python:
 - def __repr__(self):
 - def__add__(self):

龠

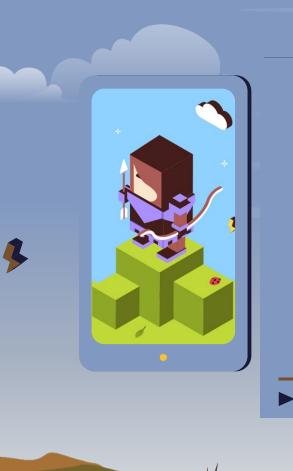

```
STORE
LUCK ROYALE
